

Taskly

Task Management System — Project Submission
MEAN Stack Course — Session Task: Project Idea Research & Planning

1. Project Name

Taskly

2. Project Description

Taskly is a simple personal task management application that helps users organize their daily tasks in one place. Users can create an account, log in, and manage their own to-do list — adding tasks, tracking their status (pending or done), and attaching an optional image to a task. An administrator has oversight of the system and can manage registered users.

Problem it solves:

Many people struggle to keep track of daily tasks and need a simple, centralized place to organize them.

Target users:

Individuals who want a lightweight personal task tracker, and an administrator who manages the platform's users.

Main purpose:

To let each user securely manage their own tasks (create, view, update, delete, and attach an image) while giving an admin basic oversight of the user base.

3. User Roles

Role	Permissions	Available Actions
Admin	Manage all registered users	View all users, remove a user
User	Manage own tasks and profile	Register, log in, create/view/update/delete own tasks, upload a task image, upload a profile image

4. Main Features

Authentication Features

- ✓ Register (Signup) — with password hashing (bcrypt)
- ✓ Login (Signin) — returns a JWT token

Authorization Features

- ✓ Role-based system: admin / user, stored on each account
- ✓ JWT-based session token issued at signup/login

Note: route-level protection (restricting endpoints by role/ownership) is the next increment planned for this project — see Section 7.

CRUD Features — Tasks Management

Create:

- Add a new task (title, description, due date, image)

Read:

- View all tasks
- View a single task's details

Update:

- Edit task information
- Change task status (pending / done)

Delete:

- Remove a task

5. Image / File Upload Features

Upload	Allowed types	Max size	Uploaded by
User profile image	JPG, PNG	5 MB	Users (defaults to a placeholder avatar if skipped)
Task attachment image	JPG, PNG	5 MB	Task owner

6–7. UI Design

The following screens were designed to cover the app's core flows: Login, Register, My Tasks (home), and Add Task (with image upload).

Screen	Contains
Login	App logo, email field, password field, Log in button, link to Register
Register	Full name, email, password fields, Create account button, link to Login
My Tasks (Home)	Header with user avatar, filter tabs (All / Pending / Done), task cards with checkbox / edit / delete, floating Add Task button
Add Task	Title, description, due date fields, image upload box, Save Task button

8. Project Documentation Summary

Project Name

Taskly

User Roles

Admin:

- Manage registered users

User:

- Manage own tasks (create, view, update, delete)
- Manage own profile and image

Features List

Authentication:

- ✓ Register
- ✓ Login

Authorization:

- ✓ Role field (admin / user) on each account
- ✓ JWT session token

CRUD:

- ✓ Manage tasks (create, read, update, delete)

Upload:

- ✓ Profile images
- ✓ Task attachment images

9. Development Progress & Next Steps

This is a living project — features are being implemented and pushed incrementally. Current status:

- ✓ Project structure set up (models, controllers, routes, middlewares, utils)
- ✓ MongoDB database connected
- ✓ Task CRUD — fully implemented and tested via Postman
- ✓ Image upload for tasks and user profiles — implemented and tested
- ✓ Authentication (Signup/Signin with hashed passwords + JWT) — implemented and tested

Planned next:

- Authorization middleware (protect routes, restrict task actions to the owning user)
- Admin-only user management endpoints
- Frontend implementation (Angular)
